Chat Project

## Objective

- Created a distributed application that allows multiple users to chat.
- The server program controls one or more chat sessions.
- Two users can chat with each other using the client programs. The
- The first user connects to the server, and the server will wait for the second user to connect. Once there are two users connect to the server, the server will then create a chat session for this two users.
- If there are another users connect to the server, the server will create a new session for these users.
